Broom
HB580

4000 series

The HB580 **Power Broom** is designed for sweeping and removal of material such as snow, leaves, dirt, light gravel, and even thatch. A corner-less frame design permits sweeping against curbs and allows for the cleaning of corners.

The HB580 Broom can be hydraulically angled left or right and lifted up or down all with the S.D.L.A. Control

An optional electric actuator allows the operator to adjust the speed and direction of the broom rotation, maximizing effectiveness and allowing the operator to reverse broom rotation, all from the seat of the tractor.

The broom stands alone when detached and can be easily reattached. A self-leveling feature keeps the broom horizontal at all times, and the nylon bristle broom cores can be changed in just a few minutes.

Standard Features:

- Hydraulic Angle from the Operator Seat
- Adjustable gauge wheels
- “Cornerless” Frame
- Ventrac Mount System

Optional Accessory:

- Electric Actuator for reverse rotation and slower speeds
