

Winter Service Checklist

Ventrac tractors and attachments are designed to work hard through the winter cold and snow. However, prolonged exposure to salts, de-icers and other corrosive agents can cause steel to rust, aluminum to oxidize and electrical connections to corrode. This exposure can ultimately reduce performance and shorten the life of your equipment.

Protect your investment and **reduce** maintenance costs! Follow our easy checklist to **extend the life** of your Ventrac equipment and help keep it in proper working condition for when you need it most.

Pre-Winter Season

- ☐ Wash equipment thoroughly with soap & water. This helps remove harmful contaminants and corrosive agents.
- ☐ Check to ensure that all devices function properly
- ☐ Properly adjust skid shoes and cutting edges, replace if necessary
- ☐ Inspect belts and chains on attachments (if applicable)
- ☐ Apply dielectric grease to all electrical connections
- ☐ Apply paint to any spots that are lacking
- ☐ Spray attachments with an outdoor corrosion & rust preventative
- ☐ Grease all grease points

In-between snow events

- ☐ Wash equipment thoroughly with soap & water
- ☐ Spray areas prone to rust (such as bare steel or areas that are exposed to salt) with an outdoor corrosion & rust preventative

Post-Winter Season

- ☐ Wash equipment thoroughly with soap & water
- ☐ Apply Dielectric Grease to all electrical connections on attachments
- ☐ Apply paint to any spots that are lacking
- ☐ Spray attachments with an outdoor corrosion & rust preventative
- ☐ Grease all grease points

Maintaining Snow Equipment Video

VIDEO FEATURE: Ventrac Service Manager, Chad Nolt, explains how to extend the life of your Ventrac.
